

FALL PREVENTION WORKING PLATFORM

The Proprietary Safety Deck system is a low cost effective way to erect our timber frame systems. It is designed to reduce risk and provides a safe platform for teams working above ground level. Easy to erect with three components, the deck enables increased speed and productivity and can be erected and ready for use within an hour.

Features include a nonslip surface and high visibility colours and the system, exceeds HSE regulations and has a load capacity of up to 2kn per m². It is suitable for any shape or size project with flexible panels in a variety of sizes and adjustable height of up to 3m.

Key features of the safety fall prevention system are:

- Prevents the fall rather than arresting the fall
- Production efficiency is improved through working from a safe platform
- Lightweight and easy to install
- Fast installation during the timber frame erect process
- Potential to cross hire to main contractor to protect follow-on trades
- Hire durations can be reduced with increased off site fabrication

For further information about the Fall Prevention Working Platform, please get in touch.
